

Provide the most secure, trackable temporary access in the industry with
SENTRYCONNECT

More Control, Information, and Security

You have the power to provide an unprecedented level of security, control, and peace of mind for you and your client with SENTRYCONNECT®. Available through the SENTRYKEY® Real Estate mobile app/website, SENTRYCONNECT lets you grant secure, temporary, trackable lockbox access to a specific individual – an out-of-area agent from a neighboring board/brokerage, a painter, an inspector, or a contractor – who needs controlled access to a property.

Secure, Temporary, Trackable

By granting lockbox access to that specific person for a specific date and time range, the possibility of code sharing is eliminated. You receive instant notifications via the message center when the SENTRYCONNECT user accesses the property, so you're always in the know with specific, up-to-date information. And, you can schedule access up to 14 days in advance, and for 14 consecutive days (significantly longer than most competitors), and revoke any access you've granted. These are all powerful SENTRYCONNECT features you've come to rely upon and trust for controlled access.

More Dynamic Features for the SENTRYCONNECT User

A new, more user-friendly version of the SENTRYCONNECT app provides more information and assistance than ever before. With the new app, users will be able to:

- View SENTRYLOCK lockboxes they have been granted access to in a specific area.
- See a Google Maps view of the assigned property location and get directions.
- Access the property securely without the need for an authorization code or PIN.
- Access the listing agent's contact information.
- View property-specific information such as alarm codes and instructions after receiving access.
- Update personal information, including photo, occupation, phone number, email, and more.
