

Association Dashboards

Increase adoption, provide support, and manage inventory and upgrades at a glance.

Data at Your Fingertips

The cutting-edge Association Dashboard tool will allow associations to better understand how to support and train agents, track when and where lockbox upgrades are needed, and more. Three new reports will be available:

Lockbox Utilization

The Lockbox Utilization tab will provide visual representation of who is utilizing their lockboxes – and how often – to show associations where they can increase and optimize lockbox utilization. This includes if, where, and by whom each lockbox is being used, and where lockboxes may be needed. Level inventory between brokers and agents throughout your organization based on listing and lockbox data here.

Lockbox Accesses

The Lockbox Accesses tab will show overall access counts to lockboxes. This will give insight into the level of interest on a listing based on accesses rather than days on the market or price. Associations will see a “heat map” of properties identified by access counts, including information like type of accesses, lifetime accesses, month over month accesses, as well as the size of hot properties in each price range.

Lockbox Inventory

Track inventory by viewing total lockboxes purchased, distributed, owned, and available with the Lockbox Inventory tab. This will provide data on purchase history, when new lockboxes may be needed, where/if old lockboxes aren't being utilized, and where to reallocate available boxes. This tab will allow associations to simply focus on managing inventory.
